## Scan settings

|                 |           |
|-----------------|-----------|
| Scan subdomains | Yes       |
| Scan as device  | Detectify |

# ● Email Spoofing / Missing SPF Record

## What does this mean?

The domain lacks a DNS SPF policy record. SPF policies must to be applied on every domain (including subdomains) having either an A, AAAA or MX record.

here (<http://support.detectify.com/customer/en/portal/articles/2166468-missing-spf-record>).

## What can happen?

An attacker will be able to spoof emails originating from the domain, hence, open up for phishing attacks or other scams.

## Summary

| Entry | Found at     | CVSS |
|-------|--------------|------|
| 1     | putpeace.com | 6.2  |

### Summary

### Resources

MISC - SPF Validator ([dmarcanalyzer.com](https://dmarcanalyzer.com))

## What does this mean?

The web server discloses the name of its operating system.

## What can happen?

This information could help an attacker determine which attack vectors the attacker are to use when targeting the system.

nginx/1.4.6 (Ubuntu)

## Operating System

Ubuntu

### What does this mean?

The HTTP-server discloses what type of technology that is currently used on the HTTP-server.

### What can happen?

An attacker can use that information to look up known vulnerabilities in the specific technology and then use them against the website.

Server

nginx/1.4.6 (Ubuntu)

## Technology

nginx/1.4.6 (Ubuntu)

## What does this mean?

The web site lacks content sniffing hardening techniques.

## What can happen?

This may open up for XSS attacks as browsers will attempt to guess how to render specific resources without the correct policies.

## Details

Add a X-Content-Type-Options header and set the value to nosniff.

## What does this mean?

The web site reveals one or more email addresses in plain text.

## What can happen?

Spammers can easily gather these email addresses and use them in spam campaigns. An attacker may also use those email addresses for spear phishing and other attacks.

## Email

team@putpeace.com

### What does this mean?

The web site includes resources hosted on an external domain.

### What can happen?

The owner of the domain the resources are loaded from have control over the resources and can change it without the owner of the web site knowing, and by doing so also affect the web site loading the resources.

This could be done by the owner of the external domain or an attacker who manage to hack it.

## Details

<!-- Angular Material style sheet -->

# ● HTTP Server Version

## What does this mean?

The web server publicly discloses which web server software it's and possibly which specific version.

## What can happen?

An attacker can use that information to look up known vulnerabilities for the specific software and then use them against the website.

## Summary

## Lacking DMARC Policy

### What does this mean?

The domain lacks a DMARC policy.

### What can happen?

An attacker will be able to spoof emails originating from any subdomain having either an A, AAAA or MX record. In most clients this is possible regardless if SPF policies are put in place.

### Summary

| Entry | Found at                            | CVSS |
|-------|-------------------------------------|------|
| 1     | <a href="#">_dmarc.putpeace.com</a> | 0    |

## 1. Lacking DMARC Policy

### Summary

**Found At**

\_dmarc.putpeace.com

**CVSS**

0 of 10.0

**Command**

dig +short TXT \_dmarc.putpeace.com

### Details

Consider adding a DMARC policy on \_dmarc.putpeace.com and set the directive "sp" to "reject".

## What does this mean?

The listed providers are authorized to host different parts of your infrastructure.

## What can happen?

Anyone can retrieve this data. It's only here to serve as an indicator of what vendors have access to.

## Summary

| Entry | Found at     | CVSS |
|-------|--------------|------|
| 1     | putpeace.com | 0    |

## 1. Service Providers

### Summary

**Found At**  
putpeace.com

**CVSS**  
0 of 10.0

### Name Service Provider

domaincontrol.com

### Hosting Provider

Microsoft

### Mail Provider

zoho.com

## What does this mean?

External parties may look up contact information and other data related to your server environment and employees by querying a whois server. These types of lookup services could be used by an attacker to gather intelligence about you and your domain. However, there should always be whois records available. It's a fundamental part of being a domain owner.

The data contained in GoDaddy.com, LLC's Whois database, while believed by the company to be reliable, is provided "as is" with no guarantee or warranties regarding its accuracy. This information is provided for the sole purpose of assisting you in obtaining information about domain name registration records. Any use of this data for any other purpose is expressly forbidden without the prior written

permission of GoDaddy.com, LLC. By submitting an inquiry, you agree to these terms of usage and limitations of warranty. In particular, you agree not to use this data to allow, enable, or otherwise make possible, dissemination or collection of this data, in part or in its entirety, for any purpose, such as the transmission of unsolicited advertising and solicitations of any kind, including spam. You further agree not to use this data to enable high volume, automated or robotic electronic processes designed to collect or compile this data for any purpose, including mining this data for your own personal or commercial purposes.

Please note: the registrant of the domain name is specified in the "registrant" section. In most cases, GoDaddy.com, LLC is not the registrant of domain names listed in this database.
